01

Why Deliverability Is the Only Metric That Matters

You cannot convert an email no one reads.

21%	1 in 5	83%
Average inbox placement rate across all industries	Cold emails that actually reach the inbox	Of senders who fail have never checked their setup

The Open Rate Lie

Most founders obsess over open rates and subject lines. The problem is upstream. An email that lands in spam has a 0% open rate regardless of how good the subject line is. Deliverability, whether your email reaches the inbox at all, is the foundation everything else is built on. Fix this first. Optimize copy second.

The brutal truth: most outbound programs that do not work are not suffering from bad messaging. They are suffering from invisible technical failure. Spam folders do not send you a notification. You just get silence, and blame the wrong thing.

THE CORE INSIGHT

A 20% improvement in deliverability beats a 20% improvement in copy, every time. One multiplies every email you send. The other only affects emails that arrive.

02

What Is Spam? CAN-SPAM Compliance in the US

Understanding the law before you send a single email.

Before optimizing deliverability, you need to understand what spam actually is in a legal sense, and what the law requires of you as a commercial email sender. The CAN-SPAM Act is the primary US federal law governing commercial email. Violations can result in penalties of up to $51,744 per email, per violation. This is not a technicality. It is the baseline for operating legally.

What Counts as Spam Under the Law

The CAN-SPAM Act does not prohibit cold outreach. It governs how commercial messages must be sent. A commercial email is any message whose primary purpose is to advertise or promote a product or service. Cold outbound emails to B2B prospects almost always qualify as commercial messages.

THE DISTINCTION	Spam under the law is not just unwanted email. It is commercial email that violates one or more of the CAN-SPAM requirements below. You can send cold outbound legally. You cannot send it carelessly.

The 7 CAN-SPAM Requirements Every Sender Must Follow

+ **Do not use false or misleading header information**
  Your From, To, Reply-To, and routing information must accurately identify the person or business that sent the message. Sending from a fake name or a domain you do not own violates this rule.

+ **Do not use deceptive subject lines**
  The subject line must accurately reflect the content of the message. Subject lines designed to trick recipients into opening, such as fake RE: or FWD: prefixes, are prohibited.

+ **Identify the message as an advertisement**
  You must disclose clearly and conspicuously that your message is an advertisement. There is flexibility in how you do this, but you cannot disguise a commercial message as a personal one with no disclosure.

+ **Include your physical postal address**
  Every commercial email must include a valid physical mailing address. This can be your current street address, a P.O. box, or a registered private mailbox.

© 2026 Romero NYC Marketing Agency LLC

+ **Tell recipients how to opt out**
You must include a clear and conspicuous explanation of how the recipient can opt out of receiving future messages from you. The mechanism must be easy to use and free of charge.

+ **Honor opt-out requests promptly**
You must process opt-out requests within 10 business days. You cannot charge a fee, require personally identifiable information beyond an email address, or make the recipient take more than one step to unsubscribe.

+ **Monitor what others do on your behalf**
If you hire a third party to run your outbound campaigns, both you and the sender are legally responsible for compliance. You cannot outsource your way out of CAN-SPAM liability.

CAN-SPAM vs. GDPR: Key Differences for US Senders

If you are sending to recipients in the European Union, CAN-SPAM is not enough. GDPR applies and requires explicit prior consent before sending commercial emails. Most B2B cold outbound to EU recipients requires a legitimate interest basis and is subject to stricter rules than US-only campaigns. If your list includes EU contacts, consult a privacy attorney.

Area	CAN-SPAM (US)	GDPR (EU)
Opt-out model	You can send until they unsubscribe	Consent required before first send
Cold outbound	Legal with proper disclosures	Requires legitimate interest basis
Penalty	Up to 4% of global annual revenue	Significantly higher exposure
Applies to	EU/EEA recipients	Different rules for same campaign

IMPORTANT NOTE

This page is informational and does not constitute legal advice. If you have questions about your specific compliance obligations, consult a qualified attorney. Laws change, and the penalties for non-compliance are real.

03

What Deliverability Actually Means

Three outcomes. Only one that matters.

Deliverability is not simply whether your email was sent. It encompasses three distinct outcomes, and most senders do not realize there is a difference between them:

Delivered to inbox: The goal. Full stop.

Delivered to spam/junk: Technically delivered, but dead on arrival.

Bounced or rejected: Never reached the server. Kills your domain reputation fast.

Every major email provider (Google, Microsoft, Yahoo) uses a real-time reputation score attached to your sending domain and IP. That score determines where you land. This guide will show you how to build it, protect it, and never let it slip.

Without proper setup, this is where your emails land. No notification. No bounce. Just silence.

© 2026 Romero NYC Marketing Agency LLC

04

The Inbox Algorithm

How email providers actually decide where you land.

Email providers do not think like humans. They score signals in milliseconds. Understanding their logic is the difference between campaigns that land and campaigns that disappear.

The Five Signal Categories

SENDER REPUTATION	Domain age, sending history, blacklist status, IP reputation. This is your credit score. Built slowly, destroyed fast.
AUTHENTICATION	SPF, DKIM, and DMARC records. Non-negotiable. Missing auth equals automatic demotion at most major providers.
ENGAGEMENT HISTORY	Past recipients' behavior: opens, replies, forwards, spam complaints, and deletions without opening.
CONTENT SIGNALS	Spam trigger words, excessive links, HTML-to-text ratio, image-heavy layouts, deceptive subject lines.
LIST QUALITY	Bounce rate, spam trap hits, invalid address ratio. A dirty list poisons a healthy domain.

© 2026 Romero NYC Marketing Agency LLC

05

Google's 2024 Requirements

And why they matter for everyone, not just high-volume senders.

In 2024, Google formalized requirements that many treated as optional best practices. If you send more than 5,000 emails per day to Gmail addresses, these are now mandatory. But even for lower volumes, meeting these requirements is the baseline for good deliverability across all providers.

+	**Email authentication (SPF + DKIM)**	Required for all senders. Failure means spam or rejection.
+	**DMARC policy in place**	p=none minimum. p=quarantine or p=reject preferred.
+	**Valid PTR record for sending IP**	Your IP must resolve to a hostname matching your domain.
+	**One-click unsubscribe header**	Required for bulk senders. Should be present on all campaigns.
-	**Sending from your primary brand domain**	Use dedicated sending subdomains to protect your main domain.
-	**Ignoring spam complaint rate**	Must stay below 0.10%. Above 0.30% triggers automatic filtering.

WHY THIS MATTERS

These are not suggestions. Gmail processes roughly 1.5 billion active accounts. If your setup does not meet these standards, a significant portion of your list will never see your emails.

© 2026 Romero NYC Marketing Agency LLC

06

Authentication 101

SPF, DKIM and DMARC, the non-negotiable technical foundation.

These three DNS records are the baseline of email legitimacy. Without them, you are sending unsigned mail in an age when every major inbox provider demands a signature.

SPF: Sender Policy Framework

SPF tells receiving servers which IP addresses are authorized to send email on behalf of your domain. It is a DNS TXT record that acts as an allowlist.

What a correct SPF record looks like:

```
v=spf1 include:_spf.google.com include:sendgrid.net include:yoursendingplatform.com ~all
```

`v=spf1`	Version indicator. Always required first.
`include:domain.com`	Authorize a third-party sender (ESP or SMTP provider).
`ip4:x.x.x.x`	Authorize a specific IP address directly.
`~all`	Soft fail: unauthorized senders marked suspicious. Use -all for max strictness.

Critical: You can only have ONE SPF record per domain. Multiple records conflict and break authentication. Merge all includes into a single record.

DKIM: DomainKeys Identified Mail

DKIM adds a cryptographic signature to every email you send. The receiving server checks this against a public key in your DNS. A matching signature confirms the email was unaltered in transit.

Your sending platform will generate your DKIM keys. The setup steps are:

1. Log into your sending platform and navigate to domain authentication.

2. Generate a DKIM key pair. The platform handles this automatically.

3. Copy the TXT record provided (e.g., mail._domainkey.yourdomain.com) and add it to your DNS.

4. Return to the platform and click Verify. Allow up to 48 hours for DNS propagation.

5. Use mail-tester.com or MXToolbox to confirm DKIM is passing.

© 2026 Romero NYC Marketing Agency LLC

DMARC: Domain-based Message Authentication, Reporting and Conformance

DMARC ties SPF and DKIM together and tells receiving servers what to do when authentication fails. It also gives you a reporting mechanism to see who is sending mail claiming to be from your domain.

A production-ready DMARC record:

```
v=DMARC1; p=quarantine; rua=mailto:dmarc@yourdomain.com; pct=100; adkim=r; aspf=r
```

Policy	What It Does
p=none	Monitor only. Emails pass regardless. Good starting point while gathering data.
p=quarantine	Failed emails go to spam. Use once SPF and DKIM are confirmed solid.
p=reject	Failed emails are rejected outright. Use after 30 days of monitoring.

ROMERO RULE	Start with p=none for 2 weeks. Review reports. Move to p=quarantine. After another 2 weeks with no issues, move to p=reject. Never skip steps.

07

Domain Strategy

Protect your brand. Scale your sends. Never mix the two.

Sending cold outbound from your primary brand domain is one of the most dangerous mistakes in outbound marketing. One bad month of complaints can tank a domain you have spent years building. The fix is simple: use dedicated sending domains.

The Dedicated Domain Architecture

Never send cold outbound from yourbrand.com. Instead, register sending variants that look professional but keep your primary domain insulated:

Role	Example	Notes
Primary (never send from)	yourdomain.com	Your brand home. Protect at all costs.
Sending Variant A	getyourdomain.com	Action + brand name variation.
Sending Variant B	yourdomain.io	Category + brand name variant.
Sending Variant C	meetyourdomain.com	CTA-driven variant.
Sending Variant D	yourdomain.biz	Simple alternative extension.

© 2026 Romero NYC Marketing Agency LLC

08

Domain Rotation and Capacity Planning

How to map sending volume to infrastructure.

Each warmed domain can safely send roughly 40 to 50 emails per day per inbox. With 3 inboxes per domain, that is 120 to 150 sends per day per domain. Plan your volume accordingly:

Setup	Daily Volume	Best For
1 Domain, 1 Inbox	~50/day	Starting out or testing a new ICP
1 Domain, 3 Inboxes	~150/day	Early-stage campaigns
3 Domains, 3 Inboxes each	~450/day	Scaled outbound, multiple ICPs
5 Domains, 3 Inboxes each	~750/day	High-volume programs
10 Domains, 3 Inboxes each	~1,500/day	Agency-level or enterprise outbound

This is the destination. Every configuration decision in this playbook exists to make this happen.

© 2026 Romero NYC Marketing Agency LLC

09

The Warmup Protocol

From zero to 500 sends per day, without torching your reputation.

A fresh domain has zero reputation. Sending 200 emails on day one is the fastest way to get blacklisted. Warmup is the process of gradually building sending history so inbox providers learn to trust you before you scale.

The 6-Week Warmup Schedule

Period	Daily Volume	What You Are Doing
Week 1	5 to 10/day	Manual sends only. Real conversations. Replies expected.
Week 2	10 to 25/day	Begin automated warmup tool. Mix manual and automated.
Week 3	25 to 50/day	Automated warmup plus first light campaign sends (10 to 15 real prospects/day).
Week 4	50 to 100/day	Scale real campaign sends. Monitor reply rates and complaints daily.
Week 5	100 to 200/day	Full campaign scale. Stop manual sends. Automated warmup runs in background.
Week 6+	200 to 500/day	Max send volume for 3 inboxes. Warmup tool stays on indefinitely.

NEVER TURN IT OFF

Warmup is not a phase, it is permanent infrastructure. Keep your warmup tool running alongside every active campaign for the lifetime of the domain.

© 2026 Romero NYC Marketing Agency LLC

10

Warmup Tool Recommendations

The platforms that build your reputation on autopilot.

Use a dedicated warmup tool that operates independently from your campaign sending. These tools simulate real email conversations between real inboxes, building positive engagement signals with your new domain:

Smartlead Warmup: Built-in to Smartlead. Recommended if you are already on the platform.

Instantly Warmup: Large warmup network. Strong deliverability data. Pairs well with Instantly campaigns.

Mailreach: Standalone tool. Works with any ESP. Detailed reputation monitoring dashboard.

Lemwarm by Lemlist: Solid option with good network size. Integrates with Lemlist campaigns.

Warmup is exactly what it sounds like: carefully applying heat until your domain is ready to perform.

© 2026 Romero NYC Marketing Agency LLC

11

Sending Infrastructure

The tools and configurations that serious outbound programs run on.

The platform you send from matters less than how you configure it. Not all platforms are created equal.

Platform Comparison

Platform	Rating	Best For
Smartlead	5/5	Best for agencies. Multi-inbox, built-in warmup, strong deliverability.
Instantly	5/5	Best for high volume. Large warmup network. Clean UX.
Apollo.io	3/5	Great for prospecting and list building. Sending capability is secondary.
Lemlist	4/5	Strong personalization features. Image and video personalization.
Outreach.io	3/5	Enterprise tool. Better for AE follow-up than cold outbound.
Mailshake	3/5	Simple. Good for beginners. Limited deliverability controls.

© 2026 Romero NYC Marketing Agency LLC

12

List Hygiene

The silent reputation killer most senders never diagnose.

You can have perfect authentication, a warmed domain, and great copy, and still get destroyed by a dirty list. List quality is one of the most underestimated factors in deliverability.

2%+	0.10%	0.08%
Bounce rate that triggers provider penalties	Spam complaint threshold before Gmail acts	Spam trap hit rate that signals to blacklists

The 5 Types of Bad Email Addresses

Hard Bounces

Addresses that do not exist. The fastest reputation killer. Remove after one bounce. Never retry.

Soft Bounces

Temporarily undeliverable (full inbox, server down). Retry up to 3 times over 72 hours, then suppress.

Spam Traps

Set by ISPs and blacklist providers to catch senders with poor list hygiene. You will not know you hit them until the damage is done.

Role Addresses

info@, support@, admin@. Team inboxes, not decision makers. Suppress them. High complaint risk, low engagement.

Catch-All Addresses

Domains that accept every email regardless of whether the mailbox exists. Bloat your metrics and hide your real bounce rate.

© 2026 Romero NYC Marketing Agency LLC

How to Build a Clean List

Verification is not a one-time step. It is a recurring process. Every list, every time, before it enters your sending platform.

1. Source from reputable tools

Apollo.io, Clay, LinkedIn Sales Navigator. Start with quality before verification.

2. Remove role-based addresses

Filter out info@, admin@, support@, hello@, team@, and any other non-personal prefixes.

3. Remove duplicates

Deduplicate by email address and by domain to avoid battering the same company.

4. Verify the list

Run through ZeroBounce, NeverBounce, or equivalent. Target 95%+ verified deliverable rate.

5. Suppress previous unsubscribes

Maintain a global suppression list and apply it to every new list before sending.

THE THRESHOLD	If your verified deliverable rate comes back below 90%, do not send. Rebuild the list from a better source. The cost of a bad send far exceeds the time saved by skipping verification.

© 2026 Romero NYC Marketing Agency LLC

13

Verification Tools

The services that confirm your list is clean before you send.

Verify every list before it goes into your sending platform. No exceptions. Target a verified deliverable rate of 95%+ before sending. Below 90%, rebuild the list.

Tool	What It Does Best
ZeroBounce	Industry standard. Spam trap detection, catch-all scoring, MTA validation.
NeverBounce	Real-time API verification. Good for large lists. Bulk and real-time options.
Millionverifier	Budget-friendly. Strong accuracy. Good for high-volume agency use.
Bouncer.io	High accuracy catch-all detection. Excellent for B2B lists.

ONGOING HYGIENE

Re-verify any list that has been sitting unused for 90 days or more. Email addresses go invalid constantly. A list that was 96% deliverable six months ago may be significantly lower today.

Key Metrics to Monitor After Sending

Metric	Healthy Range	Action Threshold
Hard Bounce Rate	Below 2%	Above 5%: stop and audit your list immediately.
Soft Bounce Rate	Below 8%	Persistent soft bounces often signal deliverability issues.
Spam Complaint Rate	Below 0.10%	Above 0.30% triggers automatic Gmail filtering.
Unsubscribe Rate	Below 0.5%	High unsubs signal poor targeting or irrelevant messaging.

© 2026 Romero NYC Marketing Agency LLC

14

Copy That Clears Filters

Writing for inbox placement, not just human readers.

Spam filters read your emails before humans do. The good news: writing for deliverability and writing for conversion are more aligned than people think. Conversational, concise, and personalized emails win on both fronts.

The HTML vs. Plain Text Question

For cold outbound: plain text wins. Always. Rich HTML templates, heavy design, and tracked images signal that you are a bulk mailer. Spam filters know it. Prospects feel it. A plain-text email that looks like it came from a human gets treated like one.

THE TEST

Read your email out loud. Does it sound like something a real person would write to a specific prospect? Or does it sound like marketing copy? Filters and people both know the difference.

Trigger Words to Avoid

Certain words and phrases have trained spam filters over decades. Avoiding them will not guarantee inbox placement, but including them is a reliable way to get flagged:

x Free / Free trial	x Guaranteed	x No risk
x Click here	x Act now	x Limited time offer
x Exclusive deal	x 100% satisfied	x Earn money
x Make money fast	x Work from home	x Risk-free
x Congratulations	x Winner	x You have been selected
x Lowest price	x No obligation	x Special promotion

© 2026 Romero NYC Marketing Agency LLC

15

The Structural Rules

Format and structure decisions that affect inbox placement.

Beyond words, the structure of your email sends strong signals to filters. Here is what works and what to avoid:

+	**Keep emails under 200 words** Concise reads human. Long reads like marketing.
+	**One link maximum (ideally zero in step 1)** Every link is a filter signal.
+	**Personalized first line** Filters and humans both reward relevance.
+	**Plain text or minimal HTML** One font, no images, no tracking pixel if possible.
+	**Send at business hours in recipient timezone** Improves open timing and reduces complaint risk.
-	**Unsubscribe links in step 1** Use in sequences of 3 or more steps only.
-	**Heavy images or banners** Marks you as a bulk mailer immediately.
-	**ALL CAPS in subject lines or body text** Automatic filter penalty.
-	**Excessive punctuation** Classic spam signal. Never use.
-	**Misleading or clickbait subject lines** Complaint magnet. Destroys reputation fast.

THE HUMAN FILTER

Before every campaign goes live, send a test to yourself. Read it as if you received it cold. If you would delete it, edit it. If you would mark it spam, start over.

© 2026 Romero NYC Marketing Agency LLC

16

Benchmarks by Industry

Know your numbers. Measure against the right baseline.

These benchmarks are derived from aggregated data across cold outbound campaigns. Use them to calibrate expectations and diagnose performance. Significantly below these numbers? Deliverability is usually the first place to look.

Industry	Inbox Rate	Open Rate	Reply Rate	Meeting Conv.
SaaS / Technology	78 to 85%	38 to 52%	3 to 7%	1.5 to 3.5%
Professional Services	80 to 88%	42 to 58%	4 to 9%	2 to 4%
Financial Services	72 to 80%	35 to 48%	2 to 5%	1 to 2.5%
Healthcare / MedTech	70 to 78%	30 to 44%	2 to 4%	0.8 to 2%
Manufacturing	82 to 90%	40 to 55%	4 to 8%	2 to 4%
Marketing / Agencies	65 to 75%	28 to 40%	2 to 4%	0.5 to 1.5%
Real Estate	78 to 85%	38 to 50%	3 to 6%	1.5 to 3%
Staffing / Recruiting	80 to 88%	45 to 60%	5 to 10%	2 to 5%

How to Use These Benchmarks

Inbox rate below 70%? Stop and fix authentication, warmup, and list hygiene before touching copy or targeting.

Open rate below benchmark? Subject line problem, or inbox placement issue. Run a deliverability test to rule out the latter first.

Reply rate below benchmark? Targeting or copy issue. Your ICP definition is likely too broad, or your value proposition is not resonating.

Reply rate strong but meetings low? Your replies are curiosity, not intent. Revisit your CTA. You are probably asking for too much commitment too fast.

© 2026 Romero NYC Marketing Agency LLC

18

The Pre-Launch Checklist

Go/no-go before you send a single email.

Run this checklist on every new domain and every new campaign. If any item fails, stop. Fix it first. One item missed can compromise the entire campaign.

Domain and Authentication

+	**SPF record published and verified**	Test at mxtoolbox.com/spf. Must return PASS.
+	**DKIM record published and verified**	Test at mxtoolbox.com/dkim. Must return PASS.
+	**DMARC record published**	Minimum p=none. Test at mxtoolbox.com/dmarc.
+	**PTR/rDNS record configured**	Your sending IP resolves to a valid hostname.
+	**Domain is NOT your primary brand domain**	Must be a dedicated sending variant.
+	**Domain is at least 14 days old**	Fresh domains (under 14 days) get filtered heavily.
-	**Using a free email provider to send**	Never. Always a custom domain.

Infrastructure

+	**Warmup tool has been running for 14+ days**	No exceptions. Warmup is not optional.
+	**Sending volume is within warmup limits**	Check your warmup schedule in Section 08.
+	**Inbox rotation configured (3+ inboxes minimum)**	Never send from a single inbox.
+	**Sending platform properly connected to domain**	Test with a manual send to a personal inbox.

© 2026 Romero NYC Marketing Agency LLC

+	**Tracking domain is a custom subdomain** Never use a shared tracking domain.
-	**Open tracking enabled on step 1** Tracking pixels add filter risk. Disable for step 1.

© 2026 Romero NYC Marketing Agency LLC

List Quality

+	**List verified with a third-party tool** ZeroBounce, NeverBounce, or equivalent.
+	**Verified deliverable rate is 95%+** Below 90%, rebuild the list.
+	**Role addresses removed** Suppress all role-based addresses.
+	**Catch-all addresses flagged or suppressed** Optional but recommended for clean data.
-	**Sending to purchased lists without verification** Never send unverified.

Copy and Sequence

+	**Sequence tested with mail-tester.com (score 9+/10)** Below 9: diagnose before sending.
+	**No spam trigger words in subject or body** Review the list in Section 13.
+	**Step 1 is plain text, conversational, under 200 words** Non-negotiable for cold outbound.
+	**Personalization variables tested with real data** Confirm merge fields are populating correctly.
-	**More than 2 links in any single email** Maximum 1 link per email; zero in step 1.

© 2026 Romero NYC Marketing Agency LLC

ABOUT

Romero Marketing

We book the meetings. You close the deals.

Romero Marketing runs AI-powered outbound email campaigns for B2B companies ready to scale. We manage the entire outbound process, from list building and domain infrastructure to personalized sequences and ongoing optimization.

Our model is simple: you pay only when a qualified prospect appears on your calendar. No retainers. No contracts. No impressions. No vague metrics. Just meetings with people who match your exact ICP, typically within 10 to 14 days from launch.

Who We Work With

B2B companies where a single client is worth $10,000 or more. If one new client covers our entire service, the math works in your favor from day one.

What Makes Us Different

◆ Pay Per Meeting

You are charged only when a confirmed meeting appears on your calendar. Not on campaign launch. Not on replies. On meetings.

◆ Zero Upfront Cost

Full campaign buildout, list research, copy, and infrastructure, all included before you pay a cent.

◆ 14-Day Time to First Meeting

Most clients see their first confirmed meeting within two weeks of campaign launch.

◆ Full-Stack Done For You

We handle every part of the outbound process. You just show up to the meetings we book.

© 2026 Romero NYC Marketing Agency LLC

READY TO SCALE?

Book a free 20-minute strategy call at romero.nyc. We will audit your current outreach, identify your highest-value prospects, and tell you honestly if we are the right fit. No pitch deck. No pressure. Just a real conversation.
